

Test Organic Compounds

Matching

- | | | |
|-------|----------------------|---|
| _____ | 1. Organic Compounds | a. putting small molecules together to make large molecules |
| _____ | 2. Monomer | b. chemistry that deals with organic compounds |
| _____ | 3. Covalent Bonds | c. made of many small molecules |
| _____ | 4. Polymer | d. electrons in the first energy level |
| _____ | 5. Organic Chemistry | e. breaking apart large molecules to make small molecules |
| _____ | 6. Polymerization | f. a small molecule like an amino acid or fatty acid |
| _____ | 7. Valence electron | g. bonds in which electrons are shared |
| _____ | | h. bonds in which electrons are given up or taken in |
| _____ | | i. electrons in the last energy level |
| _____ | | j. compounds that contain carbon |
| _____ | | h. compounds that are found in nonliving things |

Multiple choice

1. All of the following are foods that are high in carbohydrates except
 - a. orange juice b. bread c. pasta d. steak
2. What is the main function of lipids?
 - a. first source of energy b. storing energy c. carries the genetic code d. water proof
3. What is a monomer of a nucleic acid?
 - a. nucleotide b. fatty acid c. monosaccharide d. amino acid
4. Two types of proteins are structural and _____.
 - a. polysaccharides b. steaks c. functional d. enzymes
5. Other than the first energy source what is a function of carbohydrate?
 - a. structure of cellulose b. fight disease c. build proteins d. all of these
6. A saturated fat is solid at room temperature and comes mainly from
 - a. animals b. vegetables c. fungi d. protists
7. How many different amino acids are there?
 - a. 41 b. 22 c. 20 d. over 100
8. Two monomers of lipids are _____ and _____.
 - a. fatty acids and glycerols b. monosaccharides and disaccharides c. saturated and unsaturated d. amino acids and nucleotides
9. What is another function of a nucleic acid other than carrying the genetic code?
 - a. providing energy b. building proteins c. chemical messengers d. none of these
10. What is a polysaccharide?
 - a. simple sugar b. a monomer for proteins c. an amino acid d. complex sugar
11. What foods are high in proteins?
 - a. steaks b. beans c. fish d. all of these
12. Butter, oil and anything fried are foods that make up _____.
 - a. lipids b. carbohydrates c. proteins d. DNA
13. Proteins, Lipids, Carbohydrates, and Nucleic acids all have what in common?
 - a. they are synthetic b. all contain carbon c. are a major part of all organisms d. both b and c
