

Criteria	Observed indicator		Objective
	World	Region	
Material consumption growth	Total production of raw material (primary + recycled)	TMC+DR for the material concerned (primary + recycled)	Underlying progression less than 1% per annum
Recycling efficiency	Volume of recycled material divided by the quantity present in waste		Efficiency higher than 60 to 80%
NAS ratio	Net addition to stocks divided by total raw material production	Net addition to stocks divided by TMC+DR for the material considered	NAS ratio less than or equal to 20%
or	or	or	
Waste output ratio	Quantity of material present in waste flows divided by total raw material production	Quantity of material present in waste flows divided by TMC+DR for the material considered	Waste output ratio greater than or equal to 80%
