

Name: Anna

Date:

Paper airplane performance

Airplane Model	Distances flown	Features and Notes
Dart 	5m, 6m, 10m, 9m, 10m 3.7 3.5	Streamlined - not much drag. Can handle a lot of thrust (hard throw). just a little power but a lot of wind quite a lot of power but no wind

Wind, gravity, and thrust are the three main things you have to think about when you're making a paper airplane. Today I learned that natural forces like wind and gravity are the most important things. Thrust is also very important but too much can stop your plane.
