

Name \_\_\_\_\_

## Aquatic Biomes

Identify the characteristics of different aquatic biomes.

Use the clues and fill in the correct biome.

|            |        |            |                     |           |
|------------|--------|------------|---------------------|-----------|
| Freshwater | Marine | Coral reef | Freshwater wetlands | Estuaries |
|------------|--------|------------|---------------------|-----------|

1. \_\_\_\_\_ This biome is generally found in clear tropical oceans. Some animals that could be found here are sea urchins, shrimp, worms, and rays.
2. \_\_\_\_\_ This is the largest biome in the world. There are over one million different species of plants in this biome.
3. \_\_\_\_\_ This biome is not connected to the ocean. There are often floating plants found here, along with many different kinds of amphibians.
4. \_\_\_\_\_ This biome includes rivers, lakes, and streams.
5. \_\_\_\_\_ Seawater and freshwater mix together in this biome, and pickleweed is a plant with special adaptations to live here.
