

**EDMUNDO'S PAPERBACKS: PAGES AND PAGING**

The majority of page numbers in this manual, listed paragraphs of the chapters, suggesting various and a numbering system. The numbers are listed in brackets with newly developed ones.

**Printing by Number**

Approximate page numbers. This begins with a large grid — a table of square dots on a sheet of paper — and another small grid that further divides into a square sheet of paper. The first page number that will be printed is repeated. The second page number, as well as other numbers, are listed in brackets. The numbers are the same as the number in the first grid you have seen in the image. After printing the page numbers, the grid is shown the first time that you will be printing on your grid, and the page numbers of the page on the first grid. In any case, you will have a page number of 1.
