

COUNTING AROUND THE THOUSANDS.

When counting up or down in ones or hundreds, the next or the previous number always differs only one thousand.

Look at the examples below and note that when adding (less) the units always stay the same and when adding or subtracting the tens and units always remain the same.

e.g. counting in ones from 876

Counting in tens from 808

Counting in hundreds from 876

Counting in hundreds from 1 788

Have lots of goes at reading the above numbers out.
