

Swami: Space you can only hear. In space if there is a sound ...ooouuu...some sound... some vibration only is visible. You can only perceive through the ear... space... and through space... in space ...slowly the wind blows. The wind blows. You can see the...the vision of the wind...also the blowing... also you can hear. And also it can touch you. If there is a cool breeze we feel "Oh there is wind. Oh it is windy." So you have two perceptions. You can hear and you can touch. Two. And from wind comes fire. Hydrogen is but a form of wind.

Mark: Fire?

Swami: Air. Wind. Air. A form of air. Wind is air and if that burns you can see form. The nitrogen..acetylene gases and this cooking gas. Cooking gas; it is only gas. It is only like a wind.

Mark: Mm.

Swami: It is also like a wind. But if it burns you can see the form also.

Mark: Mm.

Swami: And when fire is burning, DRRRRR you hear the sound.

Mark: Mm. Crackling.

Swami: And and and. The sound effects.

Mark: Mm

Swami: Hot air

Mark: The heat.

Swami: You have two senses and the third one is you can see the form.

Mark: Mm.

Swami: The glowing form. There is a form you can see. So your eyes have come into operation.
