## Rock On!

You have just received a copy of the brand-new song by the Sparkling Ones! But there's a problem: Some of the words are missing! Each music note is labeled with a missing word from the song. Use context clues to place each word in the correct blank.

We're a band called the Sparkling Ones!  
When we see our favorite rocks and minerals, we always shout for more!  
When we're making' round the clock, we think about the three types of rock!

The first is \_\_\_\_\_, fragments compressed in places like the sea.  
If these rocks could talk, they'd say, "Aggravate me!"  
The second type is \_\_\_\_\_, rocks that change by pressure and/or heat.  
Ask people and they'll say, "These rocks can't be beat!"  
Next is \_\_\_\_\_, made from magma that's gotten real cool.  
Lots of people think that these rocks really rule!

Do rocks talk back? No, they talk right!  
"Why?" you ask? To end the obvious debate!  
But of the eight tons,  
We like these the best!

One's for shoes, it's called \_\_\_\_\_  
A new diamond's a real blockbuster!  
The one that tells water to collect \_\_\_\_\_  
But the rock we applaud the most, there's talk a peak!  
The last one is \_\_\_\_\_, the way a rock breaks.  
Now you know some 32 facts, so don't waste the take!

The Sparkling Ones have lots of favorite rocks!  
We collect them and keep them in our treasure box.  
\_\_\_\_\_ a natural glass, is one that flows.  
Made when lava cools quickly, it's all the best!  
Our second choice, \_\_\_\_\_, is used for table sets.  
Made up of cube-shaped crystals, when we see it, we say, "That!"  
Another one is \_\_\_\_\_, formed from volcanic foam.  
To find this rock, you'd need to be on the moon.  
\_\_\_\_\_ is rock made from sand and shells.  
Used as shells, this rock counts.  
Oh, look! There's gold! No, wait—our gold.  
You've only found that's gold after hours in \_\_\_\_\_!  
Our final favorite is \_\_\_\_\_, a common mineral found in rocks.  
It comes in many colors and is used in watches and clocks.

We're a band called the Sparkling Ones!  
When we see our favorite rocks and minerals, we always shout for more!
