

Even though they both have two wheels, bicycles and motorcycles are different in several key ways. Unlike a bicycle, a motorcycle has an engine. The engine powers the motorcycle, so you don't have to pedal. Motorcycles are also more dangerous than bicycles due to their engine power and speed.

Cause/Effect

Want to take a ride on your bike? First, inspect your bike to make sure that there are no hazards like loose chains or flat tires. Then, strap on your favorite jeans and elbow pads for ultimate safety. Next, put on your helmet and tighten the chin strap. Finally – you are ready to roll!

Problem/Solution

A bicycle, also known as a bike, is a human-powered vehicle. Its two wheels are attached to a frame, one behind the other. Many kids around the world enjoy riding bikes. Popular brands include Huffy, Trek, and Schwinn.

Description

Imagine this – you are enjoying a bike ride and suddenly your bike starts wobbling. You have a flat tire. This problem is easy to solve. With an adult's help, remove the tire and insert a new tube. Inflate the tube and you are quickly hit the road again.

Compare/Contrast

Many children are injured in bicycle accidents each year because they don't wear a helmet while cruising around their neighborhoods. Not wearing a bicycle helmet is quite dangerous. If you hit your head, then you may have to visit a doctor, or even go to the emergency room.
