

Final Exam

The ozone layer is a layer of air high above us called the stratosphere. This layer contains ozone molecules which made up of three atoms of oxygen. The ozone layer is being destroyed by all kinds of things from cars & trucks, many of the new chemical substances (CFC's) refrigerators, air conditioners, etc.

Before Jan 1989's international conference the Montreal on CFC's were considered "ozone friendly" they were great and used them in refrigerators, air conditioning, air conditioning, etc. But then the 1989 international CFC conference determined that they are "killing the ozone layer" and that they have been found to be responsible for the ozone layer's depletion. This is called the ozone layer depletion.

CFC's can go through water and end up killing small water animals including themselves. They are very toxic to the environment. The only way to prevent this is to stop using them and stop making them. If the ozone layer is being destroyed, there could be three serious problems with the health of the planet and the world's climate.

Reading comprehension:

1. What does CFC's:

- The ozone molecules made up of 3 atoms of oxygen and 1 atom of carbon.
- The ozone layer made up of the CFC's.
- CFC's destroy the ozone layer.
- Chlorinated compounds are known as CFC's.

2. What are the main causes of ozone depletion?

- The ozone layer is being destroyed.
- The ozone layer is being destroyed.
- The ozone layer is being destroyed.

3. What are the main causes of ozone depletion?

- The ozone layer is being destroyed.
- The ozone layer is being destroyed.
- The ozone layer is being destroyed.

4. What are the main causes of ozone depletion?

- The ozone layer is being destroyed.
- The ozone layer is being destroyed.
- The ozone layer is being destroyed.

Meaning of language

1. What is the main cause of ozone depletion?

- The ozone layer is being destroyed.
- The ozone layer is being destroyed.
- The ozone layer is being destroyed.

2. What are the main causes of ozone depletion?

- The ozone layer is being destroyed.
- The ozone layer is being destroyed.
- The ozone layer is being destroyed.
- The ozone layer is being destroyed.

3. What are the main causes of ozone depletion?

- The ozone layer is being destroyed.
- The ozone layer is being destroyed.
- The ozone layer is being destroyed.

4. What are the main causes of ozone depletion?

- The ozone layer is being destroyed.
- The ozone layer is being destroyed.
- The ozone layer is being destroyed.

Writing exercises, Part 1

- Write a short story about the environment. What kind of world would it be?

END WORKSHEET
