

### Cell Structure Match

Directions: Match the cell structure with its function and its picture.

<b>nucleus</b>	This is the brain of the cell. It controls the cell's activities.
<b>cytoplasm</b>	This is the jelly-like substance that holds and protects the cell's organelles.
<b>vacuole</b>	This is a large sac that holds food, water and waste.
<b>mitochondrion</b>	These structures are known as the powerhouses of the cell because they release energy.
<b>chloroplast</b>	This green structure found only in plant cells use energy from the sun to make food.
<b>cell wall</b>	This is the outer layer of a plant cell. It supports the cell.
<b>Golgi apparatus</b>	This structure packages and moves proteins through the cell.
<b>cell membrane</b>	This is the outer layer of an animal cell and it controls movement in and out of the cell.
<b>Endoplasmic reticulum</b>	There are two types of this structure: a smooth and a rough one.
