

Fast and slow motion

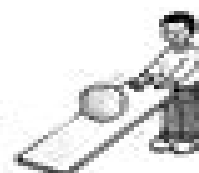

Observations

Pushes and pulls are forces that can make things move faster or slower.
Pushes and pulls can also make things stop moving.

Science activity

Answer the questions about making things move faster or slower.

How can Jason make the ball roll slower?

How can Amy make the ball move faster?

How can Luke make the bike go slower?

How can Anna make the ball move faster?

Science exploration

Design and conduct an experiment to see how you can make a marble move quickly and slowly through a cardboard tube.
