

Geometry Vocabulary Test

Place the letter of the correct term in the blank provided. No talking during or after the test.

Angle	Acute Angle	Right Angle
Obtuse Angle	Straight Angle	Complementary Angles
Supplementary Angles	Adjacent Angles	Vertical Angles
Corresponding Angles	Parallel Lines	Perpendicular Lines
Acute Triangle	Right Triangle	Obtuse Triangle
Equilateral Triangle	Isosceles Triangle	Scalene Triangle
Polygon		

- _____ 1. An angle which measures between 90 and 180.
- _____ 2. Lines that never meet or cross. They stay the same distance apart.
- _____ 3. A triangle with exactly one obtuse angle.
- _____ 4. A pair of angles whose sum is 90 degrees.
- _____ 5. An angle whose measure is exactly 180 degrees.
- _____ 6. A triangle with no congruent sides.
- _____ 7. An angle whose measure is between 0 and 90.
- _____ 8. Lines that intersect each other at right angles.
- _____ 9. Angles formed by two intersecting lines. They are opposite, or across from each other.
- _____ 10. An angle whose measure is exactly 90 degrees.
- _____ 11. A triangle with all sides congruent.
- _____ 12. A triangle with three acute angles.
- _____ 13. Formed by two lines, or rays, which meet at a point called the vertex.
- _____ 14. A pair of angles whose sum is 180 degrees.
- _____ 15. Angles that share a common vertex, a side, and do not overlap.
- _____ 16. Angle formed by two parallel lines cut by a third line. These angles are in the same position.
- _____ 17. Any shape formed by three or more line segments.
- _____ 18. A triangle with exactly one right angle.
- _____ 19. A triangle with exactly 2 congruent sides.
