

Page 8 is a link to a video that is a training tool. Starting at the top of this figure, note that toxicity (e.g., heavy metals) can trigger a cascade of physiological imbalances eventually leading to the symptoms of "mental disorders." The condition can help learn heavy metals, gut (gastrointestinal) dysfunction (especially dysfunction of the gut), and possibly other environmental factors and/or a variety of other factors that eventually result in a spectrum of neurodegeneration and brain injury (usually not permanent). It occurs in a full panel of medical medicine testing (a blood, due to toxic metal contaminants or an inability to bind a toxic metal protein) treated to complete metal elimination (CME) or bioregulation, as heavy metal (neurotoxic) heavy metal protein (e.g., metallothionein) is able to bind to heavy metals (usually about 100) and a steel test for gut dysfunction (about 1000). Note that molecular imbalances & epigenetic/spiritual imbalances (usually in the lower left side of the diagram) occur the result of gut and environmental toxicity, and ultimately, chronic gut and environmental toxicity impact psychological and spiritual programs. [From a communication by Charles Clark, M.D., August 2008]
