

The Story of Rocks

The composition of Earth is made of a hard, solid material called rock. The rocks are made of different kinds of minerals. The minerals are made of different kinds of atoms. The atoms are made of different kinds of particles.

There are three main types of rocks: igneous, sedimentary, and metamorphic. Igneous rocks are formed when the hot liquid material of the Earth cools and solidifies. Sedimentary rocks are formed when the particles of the Earth are pushed together and pressed together. Metamorphic rocks are formed when the rocks are changed by heat and pressure.

Igneous rocks are formed when the hot liquid material of the Earth cools and solidifies. Sedimentary rocks are formed when the particles of the Earth are pushed together and pressed together. Metamorphic rocks are formed when the rocks are changed by heat and pressure.

The rocks are made of different kinds of minerals. The minerals are made of different kinds of atoms. The atoms are made of different kinds of particles.

The rocks are made of different kinds of minerals. The minerals are made of different kinds of atoms. The atoms are made of different kinds of particles.

The Rock Cycle
