

A ratio states a relationship between two numbers. We often write ratios as fractions. Solve the following problems:

1. There are 20 goldfish and 30 minnows in the pond.  
What is the ratio of minnows to goldfish?
2. There are 15 quarters and 10 dimes in the jar.  
What is the ratio of quarters to dimes?
3. There are 50 stamps and 60 envelopes.  
What is the ratio of envelopes to stamps?
4. The store has 60 goggles and 90 flippers.  
What is the ratio of flippers to goggles?

5. The scale of a dinosaur mural is 1 foot for every 30 feet. If you want to draw a 90-foot dinosaur, how many feet long must it be?

6. Larry answered 8 out of every 10 questions on a test correctly. The test had 70 questions. How many correct answers did Larry give?
