

**Virtual Lab: The Cell Cycle and Cancer  
Metastasis**

1. In which phase of mitosis do each of the following occur?

- Centrioles, spindles and chromosomes move toward opposite sides of the cell nucleus
- Chromosomes condense to form visible chromosomes
- The nuclear membrane dissolves
- Spindle fibers attach to the top of the center of the cell

2. In which phases of mitosis are sister chromatids visible, and attached to each other at the centromere?

Metaphase

**Table 1:** Record your data for the number of cells in each stage of the cell cycle observed in several tissues.

Tissue Type	# of cells in Interphase	# of cells in Prophase	# of cells in Metaphase	# of cells in Anaphase	# of cells in Telophase
Lung Tissue Sample 1	14	1	2	0	0
Lung Tissue Sample 2	14	0	2	1	0
Stomach Tissue Sample 1	14	0	1	0	1
Stomach Tissue Sample 2	14	1	1	0	2
Colon Tissue Sample 1	17	0	1	2	0
Colon Tissue Sample 2	14	0	0	1	0
