Word Problems

1. Your favorite Aunt is flying to your house next month. She's coming from San Francisco to Buffalo. It's a 5 hour flight and she lives 3060 miles away from you. How fast does the plane go?

The image shows a yellow sticky note with handwritten mathematical work. At the top, there are two long horizontal lines, likely representing the number 3060. Below these, there are several long division problems written in Arabic numerals. The first problem is $3060 \div 5 = 612$. The second is $3060 \div 6 = 510$. The third is $3060 \div 3 = 1020$. The fourth is $3060 \div 4 = 765$. The fifth is $3060 \div 2 = 1530$. The sixth is $3060 \div 1 = 3060$. Each problem shows the standard long division format with a horizontal line and a box around the divisor. The quotient is written above the line. The sticky note also has a small logo for 'Math-Aids.Com' in the bottom left corner.
