

Name _____ Date _____

CELL ORGANELLES

Complete the following table by writing the name of the cell part or organelle in the right hand column that matches the structure or function in the left hand column. A cell part may be used more than once.

Structure	Cell Part
Produces a usable form of energy for the cell	
Organelle that manages or controls all the cell functions in a eukaryotic cell	
Digests excess or worn-out cell parts, food particles and invading viruses or bacteria	
Transports materials within the cell	
Provides support for the cell	
Packages proteins for transport out of the cell	
Provides temporary storage of food, enzymes and waste products	
Stores material within the cell	
Produces lipids	
The sites of protein synthesis	
The membrane surrounding the cell	
Closely stacked, flattened sacs (plants only)	
Site where ribosomes are made
