

There are seven continents on the planet earth. Continents are large pieces of land, usually surrounded by water. The seven continents are: Europe, Asia, Africa, North America, South America, Australia and Antarctica.

Asia is the largest continent, and Australia is the smallest continent. Antarctica is the coldest continent. Very few people live in Antarctica. Asia has more people than any other continent. You will find very large animals like elephants, lions, and giraffes living in Africa.

Our country, the United States of America, is on the continent of North America. The other countries in North America are Mexico and Canada. North America borders (touches) two oceans. The Atlantic ocean and the Pacific Ocean.

1. What is a good name for this article?

- North America
- Animals of Africa
- The Seven Continents

2. Evaluate this article. You would read this article for:

- Entertainment
- Getting information
- It is useful and shows you how to do something.

3. What is the name of our continent?

- Antarctica
- South America
- North America
