

Fun classroom activities for students

Walk into the mind of a classroom teacher.

So you never tried the needs-focused approach?

Would you like to make your lessons more interactive, more conjoint, more irresistible and more FUN than continue reading?

The deciding factor the [needs-focused](#) approach to learning is that there are three important needs that are each unbelievable motivators. As human race we MUST have these needs satisfied in our lives.

Everything

When teachers don't offer an appropriate lesson for our students this focus, they will seek secondhand ways to satisfy them often to the detriment of the lesson.

E.g., step one is fun. Yes, it's true humans need to have fun and if we don't receive this need for our students then our students will start to find their own fun such as rambling, wondering off, talking to friends, 2-waying, cell phones, getting out of their sit, picking boogers that doesn't even begin to describe it. We've all see it before.

Consequently, you vitally create lessons that are genuinely engaging and fun for your students that keep these types of classroom management troubles from coming about.

With that it's just part of the solution.

You can spend a huge amount of time making different kinds of fabulous lessons plans to be fun and still have classroom management problems or just have students that are simply not engaged.

The causes of these actions are:

Because, you are misplacing two other essential parts of the puzzle.

As well as applying fun in your lessons, you must also project your teachings to meet the students' need to:

1) Belong

2) Feel empowered

As Luck Would Have It, there are particular activities you can include in your lessons that gather all three needs and my buddy Rob Plevin has assembled a genuinely amazing package that will demonstrate to you how it is done.

If this needs-focused approach is clear to you (which it should) then you should desire to check out Rob's new program he calls [Needs-Focused Lessons](#)
