

Title of Experiment: The Inclined Plane

Purpose: Verify that an inclined plane is either frictionless and lighter than the other. The inclined plane will be a ramp. What will be the weight of the object? What will be the weight of the object? What will be the weight of the object?

Question: What will be the weight of the object? What will be the weight of the object? What will be the weight of the object?

Materials: What will be the weight of the object? What will be the weight of the object? What will be the weight of the object?

Procedure: How will the weight of the object be measured? How will the weight of the object be measured? How will the weight of the object be measured?

Results: What will be the weight of the object? What will be the weight of the object? What will be the weight of the object?

1. List the weight of the object and the weight of the object. What will be the weight of the object? What will be the weight of the object? What will be the weight of the object?

2. List the weight of the object and the weight of the object. What will be the weight of the object? What will be the weight of the object? What will be the weight of the object?

3. List the weight of the object and the weight of the object. What will be the weight of the object? What will be the weight of the object? What will be the weight of the object?

4. List the weight of the object and the weight of the object. What will be the weight of the object? What will be the weight of the object? What will be the weight of the object?

Conclusion: What will be the weight of the object? What will be the weight of the object? What will be the weight of the object?

1. What will be the weight of the object? What will be the weight of the object? What will be the weight of the object?

2. What will be the weight of the object? What will be the weight of the object? What will be the weight of the object?

Discussion: What will be the weight of the object? What will be the weight of the object? What will be the weight of the object?

1. The weight of the object and the weight of the object. What will be the weight of the object? What will be the weight of the object? What will be the weight of the object?

2. The weight of the object and the weight of the object. What will be the weight of the object? What will be the weight of the object? What will be the weight of the object?

3. List the weight of the object and the weight of the object. What will be the weight of the object? What will be the weight of the object? What will be the weight of the object?

References: What will be the weight of the object? What will be the weight of the object? What will be the weight of the object?

1. List the weight of the object and the weight of the object. What will be the weight of the object? What will be the weight of the object? What will be the weight of the object?

2. List the weight of the object and the weight of the object. What will be the weight of the object? What will be the weight of the object? What will be the weight of the object?

3. List the weight of the object and the weight of the object. What will be the weight of the object? What will be the weight of the object? What will be the weight of the object?

4. List the weight of the object and the weight of the object. What will be the weight of the object? What will be the weight of the object? What will be the weight of the object?
