Learning Objectives: Research Methods

Topic	Behavior	Process	Tools	Outcome
<p><b>Behavioral Research Methods</b></p>	<p>Behavioral research explores how an individual behaves and how they think and feel about it. This course will focus on behavioral research methods, including how to design studies, collect data, and analyze results. It will also cover ethical considerations in behavioral research and how to communicate research findings.</p>	<p>Behavioral research is a process that involves the systematic observation and measurement of behavior. It is used to understand how and why people behave in certain ways. This course will cover the various methods used in behavioral research, including experiments, surveys, and case studies. It will also discuss the ethical considerations that must be taken into account when conducting behavioral research.</p>	<p>Key behavioral research methods include experiments, surveys, and case studies. Experiments involve manipulating one or more variables to see their effect on a behavior. Surveys involve asking people questions about their behavior or attitudes. Case studies involve in-depth observation of a single individual or group.</p>	<p>Behavioral research is a process that involves the systematic observation and measurement of behavior.
