What effects has the computer had on our lives?

The twenty-first century is already turning out to be the century of the computer. The computer revolution that started after the Second World War is now developing more quickly and computers are beginning to influence and take over nearly every aspect of our lives. Computers are clearly changing and affecting society in many ways. The two main effects computers have had on our lives are in the areas of economics and communications.

The computer h	nas led to big changes in our le	conomic and business lives. Businesses now have to
be computerised or th	ey risk failure. 1	, every big corporation bases its operations on
computing, regardless	of which sector they are in. 2	,Coca-Cola, the BBC and Levi's
market and sell differe	ent products and services, yet	they all share one basic property – without computers
their operations would	d collapse. Computing is a gen	erator of economic dynamism. China and India and
many other developin	g countries have large IT secto	rs which drive their economies upwards. 3
335	, the more advanced econom	ies, including Germany, the United States, Japan and
Korea are moving fron	n an industrial-based economy	to a computer and IT-based one.
The other imp	ortant effect of the computer	is that communication has been totally
revolutionised. 4	, in the past, pe	ople wrote letters, which would often take weeks to
reach their destination	ns, or speak on the phone, whi	ch was terribly expensive. Now they send e-mail.
Instead of waiting wee	eks for a letter , we can read it	instantly, seconds after it's been written.
5	, many people use comput	ers to communicate with people all around the world
using chat rooms and	chat programs, this was impos	sible before the computer became widespread.
6	, now people who live thou	sands of kilometres away from each other can
communicate as much	as they want and whenever t	hey want using e-mail and/or chat rooms.
7	computers have h	ad a profound effect on our lives in many ways and it
is in business and cor	nmunication that they have l	nad the greatest influence. In the future, if the
computer continues	evolving at such speed, our b	usiness practices and methods of communication
will undergo even gre	eater changes.
