

Functions as Inputs and Outputs : Step by Step Lesson

Lesson 1: Functions Problems

1. Complete the table.

$f(x)$ is 10	
x	$f(x)$
10	1
10	1
10	1
10	1

Explanation:

When first we make an input table as:

a) Evaluate $f(x)$ in the list as 10

$f(x)$ is 10

$f(x)$ is $10-10$ (10 is 10 in the table)

$f(x)$ is 10

Therefore, the $f(x)$ is 10.

Complete the first row of the table.
