## Make it Equal

Use knowledge of order of operations to solve problems.

Put the numbers in the box in the correct order to make the equation true.

1. $\frac{5}{-} \quad \frac{6}{3} \quad \times$ $(\square\square\square) \square\square = 9$	2. $\frac{15}{=} \quad \frac{24}{3} \quad +$ $(\square\square\square) \square\square = 29$
3. $\frac{+}{15} \quad \frac{6}{-} \quad \frac{21}{2} \quad \times$ $(\square\square\square) \times (\square\square\square) = 60$	4. $\frac{\times}{4} \quad \frac{3}{-} \quad \frac{2}{6} \quad +$ $(\square\square\square) + \square\square\square = 25$
5. $\frac{4}{+} \quad \frac{36}{\times} \quad \frac{3}{2} \quad -$ $(\square\square\square) - (\square\square\square) = 34$	6. $\frac{15}{\times} \quad \frac{-}{2} \quad \frac{1}{+} \quad \frac{3}{-}$ $(\square\square\square) \square (\square\square\square) = 36$
7. $\frac{10}{-} \quad \frac{5}{+} \quad \frac{\times}{1} \quad \frac{2}{-}$ $\square\square\square + \square\square\square = 10$	8. $\frac{3}{-} \quad \frac{-}{5} \quad \frac{4}{+} \quad \frac{7}{-}$ $(\square\square\square \square\square) \square\square = 4$
