

# Baby vocabulary

1. Babies need many special things made just for them. Everything is made special, from **baby clothes** that are their small size to **baby** \_\_\_\_\_ to wash their delicate hair.
2. A special type of **underwear** for a baby is called a \_\_\_\_\_ or a **nappy**. It holds all of the baby's body wastes until they learn to go to the toilet by themselves. There are two types of them, the disposal ones where you throw them away each time you change the baby, but there are also cloth nappies that you wash after every use. The ones that you throw away have adhesive, but the cloth nappies are closed with a \_\_\_\_\_, which is a small needle that goes through the fabric and then closes.
3. A \_\_\_\_\_ is where the mum or dad change the diapers of the baby and makes him/her clean.
4. \_\_\_\_\_ is a type of medicine put on a baby's bottom to keep him or her from having a rash.
5. \_\_\_\_\_ are thin sheets of cotton that you use when you sneeze and wipe your nose.
6. A \_\_\_\_\_ is what a baby wears when it eats so that the baby doesn't get his/her clothes dirty.
7. Before babies can eat baby food they drink **milk**. Milk can come from their mother or from a special formula. The milk that does not come directly from the mother is put in a **baby bottle** for the baby to \_\_\_\_\_ on.
8. A \_\_\_\_\_ is named for the part of the mother's breast from where the baby drinks the milk. It is also the name of the rubber part of the **bottle** where the baby drinks. It is sometimes also called the **teat**.
9. A \_\_\_\_\_ is the special small bed for a baby. It normally has a type of fence or wall around the four sides so that the baby does not fall out. \_\_\_\_\_ is a small \_\_\_\_\_ sometimes called a cot.
