

Full name: _____
Date: _____

Read the text carefully then do the activities.

The use of renewable energy is not new. More than 100 years ago, wind, water and human labour, according to different energy needs. Today, when looking upon a renewable resource like solar rays to use human equipment for energy needs, about 10% of UK electricity was generated from renewable resources. Wind turbines, solar panels, etc. are also used for transportation and to provide heat for houses and business.

The use of renewable energy is still limited by the fact that they cannot always be used. Wind rays exist only when, solar rays exist only when it is sunny, and though waterfalls exist available for hydro-power.

The production of power of renewable fuels has grown more rapidly in recent years than in any other period in its history and this growth is expected to continue to grow over the next 20 years, although we may achieve almost renewable fuels to meet most of our requirements.

1. Answer the following questions according to the text!

- a) Renewable energy is not available for everybody.
- b) There are also renewable sources available in the field.
- c) It is possible to use renewable energy for transportation.

a	b	c

2. Answer the following questions according to the text.

- a) Why are renewable energy sources considered as clean?

How do you explain the advantages and disadvantages of renewable energy?

Advantages	
------------	--

Why do you think the use of renewable energy will be more developed in the future?

3. Read the text and mark whether it is true or false.

It is true.

It is false.

4. Answer the questions in the box. Explain the reason in the box next to them.

- 1. Is electricity generated from renewable sources by the company?

It is true.

- 2. Is electricity generated from renewable sources by the company?

5. Do you think the following statements are true or false?

- a) When we use solar, we will have thousands of environmental costs of energy.
- b) There is no clean energy source.
- c) It is better to use wind, solar and other renewable resources.
- d) There are many ways to get the largest solar energy.
