

Seed Dispersal Worksheet

Name _____ Date _____

A plant produces many seeds. If all the seeds fell to the ground and many would germinate. The area would become over crowded and there would not be enough water or nutrients for all the seeds. Plants have developed so that seeds can be transported in a number of different ways: by the wind, by animals eating them, by water or by sticking to animals.

Write how each seed is dispersed.

Describe how an apple seed could be dispersed by water.
