

## WHICH WAY DO I GROW?

**Supplies:** glass jar with a screw lid, 6 paper towels, water, 2 green bean seeds soaked in water overnight

**Directions:**

**Step 1:** Roll up six paper towels and place them in the glass jar.

**Step 2:** Moisten the paper towels with water.

**Step 3:** Insert two bean seeds between the paper towels and the glass so that each seed is visible from the outside of the jar as shown.

**Step 4:** Place the jar in a warm, sunny area. In about three days, observe the roots beginning to grow down from the seeds as shown. Keep the paper towels moist.

**Step 5:** When the roots are about one inch long and a shoot begins to push out of the top of the bean, screw the lid on tight and turn the jar upside down.

**Step 6:** Observe and record the growth of the roots and the shoots.
