

Home Safety

Poisons are found in almost every room of our homes. Grown-ups use many products to clean the house. These products are safe as long as they are used in the right way. They become poisons when they are used the wrong way and get into someone's body. That is why it is very important to make sure your home is safe from poisons.

1. Read and follow the directions and labels on medicines and other products before using.
2. Store harmful products out of reach and sight of small children.
3. Always put the cap back on right away after using medicines or any product that could be a poison.
4. Use safety locks on cabinets.

3 Match the safety tips to the correct picture in the house.
