

I am a polar bear. My fur is white and this makes it easy to blend in with the ice and snow around me. This adaptation is called _____.

I am a hamster. During the winter, I hibernate, an underground place to stay with other animals. I live on body fat that I stored in my body during the fall. This adaptation is called _____.

I am a snake. In the winter, I go into a hibernation. My body temperature falls, my breathing slows down. My heartbeat slows down, and I don't need much oxygen or energy. I live on stored fat when I'm in hibernation. This adaptation is called _____.

I am a whale. I move from one area of the ocean to another to find better water temperatures and food. I also move to warmer waters because they are the best spots to give birth to my calves. This adaptation is called _____.
