

Quadrilateral  $BCDE$  is inscribed in circle  $A$ . Prove that  $\angle EDC$  and  $\angle CBE$  are supplementary.

Quadrilateral $BCDE$ is inscribed in circle $A$	Given
$\angle D$ is supp to $\angle B$	opposite angles are supp.
$m\angle D = \frac{1}{2} m\widehat{EC}$	$\angle EDC +$ $\angle CBE$ are supp.

Can the quadrilateral at right be inscribed in a circle? Explain why or why not.

No, the opposite  
angles are not  
supplementary
