

Unit Five fifth-grade essay writing guide guide

fifth element composition guide

five-year 5th element composition guide

10th book is to use the fifth unit of the fourth unit assignments language practice activities collected information relating to environmental protection, write to "I and the environment" as the theme of the essay. The exercises in various forms, fully embodies the concept of curriculum reform, students choose coursework content. Can write notes, write the narrative, it can be written in recognition of draft proposals report. Several forms of the above, the most difficult is the narrative, which exercises this guide would like to focus on the narrative of the selection guide.

third of the success of an article in the skills of seven in the selection, it exercises guide students choose the right material is a critical part of teaching. Class, teachers can let students to report their data collected. Students generally will collect the water pollution, noise pollution, white trash, pollution, glare, air pollution and deforestation caused harm to other examples of environmental aspects. Then the teacher can lead students to these types of pollution, which happened around us, environmental trivial. Most students bring their own cloth bags when shopping mind, not disposable plastic bags or on the lawn signs and other more common materials. In this case, the teacher presented a picture "pet toilets," student interest. Then ask students to talk about their feelings of seeing this picture, they generally find fresh, interesting. Then the teacher told the student newspaper this picture is a picture on the news, this happened in our life, and meaningful, it can do so try to do a first-hand experience, written in the article certainly fresh and interesting. Students are more convinced of the hearing.

in this basis, students from the teacher recommended that explore how the selected material in the material? Students found to observe life as we live on air pollution often appear the phenomenon of pet waste. They often read books and newspapers, and should personally practice, this is the construction of public toilets pet newspaper obtained the information, hands-on later, is a good material. The above three points: observation of life, reading absorption, Practicing students are able, through their own inquiry to find the law, teachers can also add that it is observed even think of life after taste, if you do not think a lot of things will lose value and meaning .

Selection There are many ways, the key lesson for students to know to observe life and thought the taste of reading absorption, bending practice.

master of the law, allow students to control their own lives to collect the phenomenon of environmental damage, several methods with the above re-selection, students will find many topics to write.

such as: mother unit far from home, need to buy a motorcycle, I suggest that my mother buy electric cars because motorcycles exhaust emissions, environmental damage. This thing is observation of life to get.

Another example: some students have seen in the newspapers, "the German children's green notebook" in which there is no shopping on Sundays go to the supermarket by car, bus, thus reducing emissions. Families now have more and more private cars, you can try it yourself.
