

You can see that a single large object on one end and a single small object on the other, creates an imbalance.

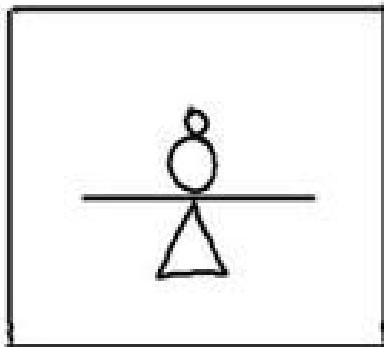

You can see that a single large object can be balanced by a grouping of smaller objects.

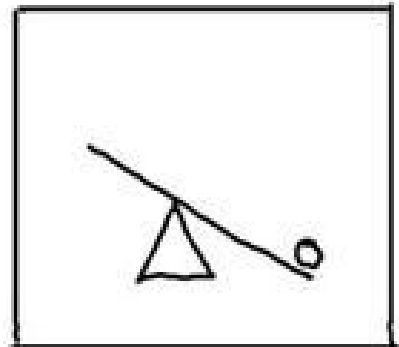

You can also balance a large object and a small one by placing the large object closer to center.

Multiple small objects can create an imbalance when they outweigh a single large object.

You can see that items stacked on top of each other over the center creates balance.

Even a small object can create an imbalance if its visual weight isn't countered.
