Answer each question.

You probably know sharks have very sharp teeth, but did you know they never run out of them? If a shark loses a tooth, another moves forward from within the shark's jaw, where it keeps a neatly ordered supply of replacement teeth. That way, it's almost impossible for a shark to end up without a full set of teeth. This is a permanent unique trait the shark has, otherwise known as the world's most famous bite. A shark can go through as many as 20,000 teeth in its lifetime!
