MAIN IDEA PRACTICE

How do you feel when you see a red wall? Researchers have studied how the color red affects people, and the results are interesting! Red can affect a person's mood in different ways. First, red makes people think of nice things, like warmth and love. On the other hand, red makes other people feel anger or danger. You may have heard someone say they are "seeing red" — that means they are feeling angry.

Does the color red make you feel hungry? It has been discovered that red makes people feel hungry, even though they don't realize it. In fact, many restaurants use red in their logo. Have you ever seen the logo for McDonald's, Chick-Fil-A, Red Robin, or Dairy Queen? They all use the color red!
